

Caldera Swing

with/without
Easymedia

- » Spectral measurements for reflective and transmissive media (backlit, film etc.)
- » Able to measure flexible materials with a thickness up to 0,7mm
- » Able to measure targets with up to 3000 patches
- » Measuring aperture 2mm
- » Measuring speed : ~12min. for 1248 fields
- » 3 measuring modes : automatic, single and density
- » USB connection
- » *Optional : EasyMedia, Caldera's profile creation software*

Easy to use, versatile and compact. Caldera Swing is the easiest way to achieve top quality prints from digital output devices.

Caldera Swing is an automated solution for linearization and profiling of photographic and wide format output devices for flexible reflective and transparent materials with a thickness up to 0,7mm.
